Panopticon Software, a provider of data visualization software for monitoring and fast analysis of financial data, signed a partnership agreement with Bishopsgate Financial, a consulting and software distribution company, to provide advanced data visualization capabilities to financial firms.

The new partnership will focus on utilizing data originating from real-time streaming sources and complex event processing (CEP) engines, to support monitoring and analysis of real-time market and risk data.

UK-based Bishopsgate Financial provides specialist consulting through its four practices: Trade life-cycle management, Front office, Transaction and Corporate banking and Technology.

Under the agreement, Bishopsgate Financial will become a reseller of Panopticon's data visualization software and will also integrate Panopticon's tools

with its own software systems.

Mike Hampson, CEO of Bishopsgate Financial, said: "Bishopsgate is committed to providing clients with the appropriate next-generation technologies at the right time in their investment cycle. Panopticon's data visualization tools offer our clients a route to speeding up business decisions and reducing investment risks. We are delighted to be partnering with them. Together, we look forward to delivering fit for purpose, robust and future-facing solutions to our financial institution clients." Chris Elsmore, SVP of Worldwide Partners and Channels for Panopticon, stated: "Bishopsgate Financial offers our financial services clients an enormous breadth and depth of needs assessment, project management, systems integration, and implementation services based on years of experience working with large banks and fund operators."

He added: "These professional services are critical components in order to ensure that budgets and timelines are met with 100% delivery of all customer requirements. Bishopsgate Financial is a very focused organization with a successful track record and our partnership with them has already proven fruitful for us and our mutual clients."
